## **Trusted DryConn® Line Expands to Include Two New Strain Relief Wire Connectors**

O'FALLON, MISSOURI – King Innovation's DryConn® original waterproof product line has expanded, with the addition of two new direct bury silicone filled tubes with snap fit strain relief lids—the DBT-600 and the DBR/Y-600.

The DBT-600 is a two part system, including a silicone filled tube and a tan wing connector. The DBR/Y-600 takes wire connections one step further, with a silicone filled tube and one of King Innovation's Gorilla Nuts™ cushion grip connectors, which allows for a comfortable, tight grip when torquing down splices. Both new connectors feature a patent pending snap-fit lid design for maximum strain relief on splices. The tube is filled with a dielectric silicone sealant, making the DBT-600 and the DBR/Y-600 UL486D listed for both waterproofing and direct bury.

King Innovation's Marketing Manager Kevin Taylor remarks, "It's rewarding to develop innovative, problem solving solutions for our customers. Now, our latest innovation Gorilla Nuts and our Tan Wing Connector provide Contractors with an outstanding product that delivers the performance and value they expect."

New DBT-600 and DBR/Y-600 are for use in outdoor applications such as low voltage lighting and two-wire decoder systems as well as Residential, Commercial, and Golf Course applications. Wire range is #22 - #8 AWG. Connectors will be available to ship in December, 2010.
