

ACE CONNECTOR™

DID YOU KNOW THAT THE ACE CONNECTOR:

Makes permanent connections?

You only need to install an ACE Connector once! The solid brass lug ensures that splices are held tight, and the set screw thread pitch allows wires to be secured tightly for a permanent connection.

Protects against the elements?

The fast curing heat shrink is lined with a sealant that surrounds splices, protecting them from harsh elements and water intrusions while keeping your splice dry and protected.

Allows for the cleanest looking connections possible?

The ACE Connector lies flat against decks, trees, ground, etc. for seamless and concealed connections. It is perfect for use in low voltage landscape lighting applications.

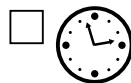

Provides a superior electrical connection?

The solid brass design of an ACE Connector dissipates heat to cool the temperature at the splice, which creates a superior electrical connection.

Is 25% longer than the competition?

ACE Connectors are equipped with a fast curing heat shrink that is 25% longer than competing connectors, making it the most secure low voltage landscape lighting connector on the market.
