

KING DRAINS®

DID YOU KNOW THAT KING DRAINS:

Feature an ergonomic soft grip design?

Several of King Innovation's Drains are designed with an ergonomic soft grip handle, which makes for a comfortable, slip-free installation.

Complement blow-outs?

Looking to remove residual water from pipes? King Drains complement end of season blow-outs to remove this standing water and provide protection against freezing and cracking pipes.

Can actually clean themselves?

A self-cleaning dirt arrester screen inhibits sediment from clogging up King Innovation's drains. They also feature a broad dispersing pad which protects against root and soil penetration.

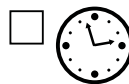

Are multi-functional?

Used in both main and lateral line applications with end of line drains available, there is no job too big for King Drains.

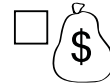

Work well under pressure?

King Drains feature a pressure sensitive valve, which opens at 10 psi to disperse water slowly at root level. The drains also feature a patented backflow check, to prevent water from re-entering and contaminating pipes.
