

**LOW VOLTAGE CONNECTORS**

**BLUE BLUE**

**TAN**

**DID YOU KNOW THAT LOW VOLTAGE:**

**Give every splice a little hug?**

Well, that might have been an exaggeration... you know, for effect. But they do surround each splice with a product specific sealant, keeping connections safe from the elements.

**Are sure strong for a low voltage connector?**

These connectors mean business. They are both waterproof and corrosion proof, and work hard to protect splices from exposure to condensation, water vapors, or dust.

**Eliminate the need for multi-step products?**

One-step® is all it takes to install a DryConn Low Voltage Wire Connector. Absolutely no pre-twisting is required.

**Are being used all over the world?**

In a variety of applications too. The DryConn Blue/Blue and Tan Low Voltage connectors are suitable for several irrigation and electrical applications, anywhere you choose to use them!

**Are part of one big family tree?**

The DryConn family that is. Been around for years, still going strong, and still adding new members. From the DryConn Black Series to the DryConn DBR/Y-600 with strain relief, these connectors stand for quality.
