IRRIGATION

King Innovation got its start in Irrigation with King Drains and has since grown in the market because of a commitment to providing quality products. The Black Series Waterproof Connectors have been a constant in the industry and the DryConn brand has expanded to incorporate a variety of waterproof connector styles. King is proud to now offer Blazing brand saddles, fittings and accessories.

CATHODIC

At King Innovation, protecting splices from harsh outdoor elements like water, temperature and corrosion is what we do best. In the cathodic market, we saw a need for an anode splice box to do just that, and our engineers developed the DryConn Visilock® with SmartGel® to meet this industry’s requirements.

WATER UTILITY

King Innovation’s interest in the water utility market was spiked when we realized contractors needed a better solution for waterproofing underground tracer wire splices. Our DryConn Direct Bury Lug Aqua ensures safe, waterproof and corrosion proof underground connections without having to cut the main line.

GAS UTILITY

King Innovation’s interest in the gas utility market was spiked when we realized contractors needed a better solution for waterproofing underground tracer wire splices. Our DryConn Direct Bury Lug Yellow ensures safe, waterproof and corrosion proof underground connections without having to cut the main line maintaining the integrity of the communication signal.
The UL Listing is a standard of safety, a mark that guarantees reliable long-term waterproof connections. At King Innovation we maintain a research/development lab and manufacturing facility on-site in O’Fallon, MO to allow for rigorous testing and ongoing quality checks.

Why is UL so important to you?

Liability
Using a connector that does not meet the strict UL standard of quality means a huge liability risk. This risk is virtually eliminated with a UL Listed splice.

Quality
When working with electricity, an unreliable connector is just not an option. A UL listing means safe splices… which means safe irrigation, lighting and electrical systems.

Compliance
A UL connector ensures that you and your customers are in constant compliance with national and local electrical codes in wet, damp and direct bury applications.

What does King do to ensure quality?

Testing
The thorough DryConn testing process ensures that these connectors can withstand 2,200 VAC while submerged, are heat aged and can endure cold… and that’s just the beginning.

Manufacturing
A controlled manufacturing process plus the use of superior materials allows DryConn connectors to meet stringent quality requirements. All processes take place in O’Fallon, MO for full visibility and regulation.

3rd Party Audits
Each quarter King is visited by a UL auditor who reviews the manufacturing processes to ensure our quality connector “recipe” is intact.

Never assume all connectors are created equally- that couldn’t be further from the truth. Do your research. For a guaranteed safe connection, count on DryConn.
